The image shows the MATLAB R2014b environment. On the left, the Command Window displays the following text:

```

> rti
*** RTI Platform Support RTI1401 activated.
*** Some Configuration Preferences are unsuitable for use with RTI.
    Details: RTIPrefMismatch.txt
    Wizard: Click here to invoke dialog based configuration now.
*** Some Configuration Preferences are unsuitable for use with ASM.
    Details: ASMPrefMismatch.txt
    Wizard: Click here to invoke dialog based configuration now.
  
```

A yellow box highlights the command `> rti` with the annotation: **1. Command창에 'rti' 입력**

On the right, the Real-Time Interface for the DS1401 MicroAutoBox is displayed. It features a grid of buttons for various components. A yellow box highlights the **MicroAutoBox II DS1512 / DS1513** button with the annotation: **2. 해당 MABX RTI 블록 더블클릭**

You are here: **MicroAutoBox II Hardware Reference > Data Sheet MicroAutoBox II 1401/1512/1513 > Connector Pinouts > DS1513 Zero Insertion Force I/O Connector**

Pinout
The following illustration shows the pin numbering of the I/O connector (front view of MicroAutoBox):

There are pins identified by capital letters (A, B, C, ...) and pins identified by small letters (a, b, c).

The following table shows the signals of the I/O connector:

1	2	3	4	5	6	
GND	in	CAN 4 high i/o	CAN 4 low i/o	GND	in	Serial 4 K / i/o LIN ¹⁾
GND	in	CAN 3 high i/o	CAN 3 low i/o	GND	in	Serial 3 TXD out Serial 3 RXD ¹⁾
GND	in	DigP 1 ch 5 out	DigP 1 ch 10 out	DigP 1 ch 15 out	DigP 2 ch 4 out	GND in C
GND	in	DigP 1 ch 4 out	DigP 1 ch 9 out	DigP 1 ch 14 out	DigP 2 ch 3 out	DigP 2 ch 8 out D
GND	in	DigP 1 ch 3 out	DigP 1 ch 8 out	DigP 1 ch 13 out	DigP 2 ch 2 out	DigP 2 ch 7 out E
GND	in	DigP 1 ch 2 out	DigP 1 ch 7 out	DigP 1 ch 12 out	DigP 2 ch 1 out	DigP 2 ch 6 out F

Analog Inputs

To avoid malfunction and/or poor signal quality, it is recommended to distinguish between the signals of the two ZIF I/O connectors (DS1512 and DS1513). For example, do not use a signal pin of one ZIF I/O connector and a GND pin of the other ZIF I/O connector together.

Pin description

The following table gives a description of the analog input pins on the DS1513 ZIF I/O connector:

Pins (DS1513)	Signal	Module	Description/Function
Z3, Y3, X3, W3, Z4, Y4, X4, W4, Z5, Y5, X5, W5, Z6, Y6, X6, W6	ADC channel 1 ... 16	ADC Unit Type 4	-10 V ... +10 V
a3, a4, a5, a6	External trigger 1 ... 4		on function of the trigger Trigger signals.
V3, U3, T3, S3, V4, U4, T4, S4, V5, U5, T5, S5, V6, U6, T6, S6	ADC channel 1 ... 16	AIO Type 1 ADC Unit	-10 V ... +10 V

Characteristics

The characteristics are specified for the following conditions: $V_{BAT} = +12\text{ V}$; $T_{CASE} = +25^\circ\text{ C}$.

ADC Unit Type 4 The following table shows the characteristics of the ADC Unit Type 4 channels. All voltages are referenced to SGND pin a2, unless otherwise noted.

Signal	Parameter	Conditions / Comments	Min	Typ	Max	Unit	
ADC (all 16 channels)	Number of independent input channels			16			
	Resolution			16		bit	
	Sample rate	Burst mode with more than 1 sample			1	MSPS	
	Input voltage range		-10		10	V	
	Conversion timer	Separate for each channel.					
		Width		27			bit
		Resolution		10			ns
		Interval				1.342	s
	Timer for time stamping	Common for all channels. Two channels are required to carry one 32 bit value.

I/O mapping

The following table shows the mapping of converter and channel numbers, as used in RTI and RTLlib, to the related I/O pins of the MicroAutoBox I/O connector:

A/D Converter	Channel	Signal	I/O Connector Pin
1	1	Analog ch 1	Z3
2	2	Analog ch 2	Y3
3	3	Analog ch 3	X3
4	4	Analog ch 4	W3
5	5	Analog ch 5	Z4
6	6	Analog ch 6	Y4
7	7	Analog ch 7	X4
8	8	Analog ch 8	W4
9	9	Analog ch 9	Z5
10	10	Analog ch 10	Y5
11	11	Analog ch 11	X5
12	12	Analog ch 12	W5
13	13	Analog ch 13	Z6
14	14	Analog ch 14	Y6
15	15	Analog ch 15	X6
16	16	Analog ch 16	W6

ControlDesk 기본 사용법

The screenshot displays the ControlDesk software interface for a project named 'CD_Traffic'. The main workspace shows a 'Test' layout with several instruments and a time plotter. The instruments include two 'Pos_AccPedal[%] Value' displays, two 'Button' controls, and a 'Time Plotter' showing a graph of 'Pos_AccPe...' over time. The time plotter shows a red vertical bar at approximately 126.5 seconds, indicating a data point or event. The 'Variables' panel at the bottom shows a table of variables, with 'Out1' highlighted in red. The 'Instrument Selector' panel on the right lists various instrument types, with 'Display', 'Numeric Input', 'Time Plotter', 'On/Off Button', and 'Push Button' highlighted in red. The 'Variables' panel at the bottom shows a table of variables, with 'Out1' highlighted in red.

Variable	Block	Platform/Device	Description
Out1	Pos_AccPedal[%]	Platform	

ControlDesk 기본 사용법

The screenshot shows the ControlDesk software interface. The main workspace displays a 'Test' window with a graph and a table. A dropdown menu is open, showing various instrument types, with 'Variable Array' highlighted. A yellow callout box with the text '2. Drag&Drop 후 Variable Array 클릭' points to this menu item. Another yellow callout box with the text '1. Vaule 값 선택' points to the 'Out' variable in the table below. The table has the following structure:

Variable	Block	Platform/Device	Description
Out	Pos_AccPedal[%]	Platform	

The Properties panel on the right shows the following settings for 'Layout5':

- Layout name: Layout5
- Background color: 0x0000
- Locked:
- Source layout:
- Content size: 1080 x 370 (disabled)
- Grid enabled:
- Grid size: Height 10, Width 10
- Instruments: Selection handle e...

ControlDesk 기본 사용법

The screenshot displays the ControlDesk software interface for a project named 'CD_Traffic'. The main workspace shows a 'Test' dashboard with a graph titled 'Out1' and a table for 'Variable Array_2447'. The graph shows a signal that is currently at 0. The table below the graph lists the variables and their current values.

Variable	Value	Unit
Pos_AccPedal[%]Out1	0	
Pos_AccPedal[%]Value	0	

A yellow text box with Korean text is overlaid on the bottom right of the dashboard area:

1. Variable Array는 파라미터 변수 값을 실시간으로 변경하여 직접적으로 Output 값을 모니터링 할 수 있습니다.

The bottom of the interface shows a 'Variables' panel with a list of variables and their descriptions, including 'Angle_SteeringWheel[deg]', 'Gear[]', 'Laneld.x_Ref[]', 'Pos_AccPedal[%]', 'Pos_BrakePedal[%]', 'Pos_ClutchPedal[%]', 'SW_BrakeLight[0Off|1On]', 'SW_ManualControl_Lights[1Maneuver|2Manual]', and 'SW_ParkingBrake[0Off|1On]'. The status bar at the bottom indicates 'Online' and '135.1 s'.

ControlDesk 기본 사용법

The screenshot displays the ControlDesk software interface. The main window shows a test environment with a graph titled "Test". The graph has a vertical axis labeled "Out1" ranging from 0 to 20 and a horizontal axis with values from 126 to 137. A red box highlights the input field for "Pos_AccPeda[%]/Value" with the value "10". Below the graph, a table shows the "Variable Array 2447: Pos_AccPeda[%]/Value" with two rows: "Pos_AccPeda[%]/Value" and "Pos_AccPeda[%]/Out1", both with a value of 10. A yellow text box with red text is overlaid on the table, stating: "1. 예를 들어 10이라는 값을 입력했을 시에 이 Vaule 값이 걸려있는 Instrument는 일괄적으로 바뀌게 됩니다". The interface also shows a project tree on the left, a properties panel on the right, and a variables panel at the bottom.

1. Plot과 같은 측정 기능을 활성화 하기 위해선 Start Measuring을 클릭합니다

The screenshot shows the ControlDesk software interface. The 'Start Measuring' button in the toolbar is highlighted with a red box. A yellow text box with Korean text is overlaid on the interface. The interface includes a menu bar, a toolbar, a project tree on the left, a central plot area, and a properties panel on the right.

The plot area shows a graph titled 'Test' with the y-axis labeled 'Out1' and the x-axis labeled 'Time'. The graph shows a single data point at 0. Below the plot, there is a table for 'Variable Array 2447: Pos_AccPedal[%]/Value'.

Variable	Value	Unit
Pos_AccPedal[%]/Value	0	
Pos_AccPedal[%]/Out1	0	

The status bar at the bottom indicates 'Online' and '135.1 s'.

The screenshot shows the ControlDesk software interface with several key areas highlighted and annotated:

- 3. Recorder 클릭**: A red box highlights the 'Start Immediate' button in the top toolbar.
- 2. Start Immediate 클릭**: A tooltip explains: "Start Immediate (F11) ignores start and stop triggers and starts recording measurement data immediately for all recorders or for a selected recorder." A red box highlights the 'Start Immediate' button in the Measurement Configuration tree.
- 4. 또는 Recorder 클릭 후 아래 클릭**: A red box highlights the 'Recorder 1' item in the Measurement Configuration tree, with an arrow pointing to the 'Start Recorder' button in the Recorder 1 panel.
- 2. Measurement Configuration 클릭**: A red box highlights the 'Measurement Configuration' tab in the bottom-left corner.
- 1. 측정 하고자 하는 변수를 Plotter에 삽입 하면 Recorder가 활성화 됩니다**: A yellow box highlights a plotter window showing a graph of 'Pos_AccPeda[%]Value' over time, with a table below it.

L. Name	Value	Raster	Platform	Unit	Downsampli...
Pos_AccPe...	0	OnChange	Platform		Automatic

ControlDesk 기본 사용법

The screenshot displays the ControlDesk software interface. The top menu bar includes File, Home, Layouting, Signal Editor, XIL API EESPort, Automation, Platforms, and View. The toolbar contains various icons for file operations, navigation, and control. The main workspace is divided into several panels:

- Measurement Configuration:** A tree view on the left showing the hierarchy of tasks and triggers. It includes sections for Acquisition, Platform, Triggers, and Recorders.
- Test Window:** A central window titled "Test" showing a graph of "Pos_AccPeda[%]/Value" over time. The graph shows a red line at 0. Below the graph is a table of data points.
- Recorder 1 Panel:** A panel at the bottom left showing the status of Recorder 1. It includes a "Recording" indicator, a timer showing 39.7 s, and a list of variables and their values.

A red box highlights the "Stop Recorder" button in the Recorder 1 panel. A yellow box with the text "1. Stop Recorder 클릭" is overlaid on the main workspace.

ControlDesk 기본 사용법

The screenshot displays the ControlDesk software interface. The top menu bar includes File, Home, Layouting, Signal Editor, XIL API EESPort, Automation, Platforms, and View. The main workspace is divided into several sections:

- Project Tree (Left):** Shows a hierarchy for 'CD_Traffic*' with sub-folders like 'Specifications', 'Project Plans', 'Global Data Sets', 'Variable Descriptions', 'Label Lists', 'Global Devices', 'Python Scripts', 'Signal Description Sets', 'Variable Filters', and 'Experiment_001*'. Under 'Experiment_001*', there are 'Experiment Layouts' (including 'vehicle.lay', 'dashboard.lay*', 'acc.lay', 'sensors.lay', 'map.lay', 'Layout5.lay*'), 'Hardware Configurations' (including 'Platform [VEOS, assigned to 'VEOS']' with 'ASM_Traffic.sdf*' and 'ASM_Traffic_Demo.sdf*', and 'VEOS Simulation Time Group 1' with 'Platform [VEOS, assigned to 'VEOS']'), and 'Measurement Data' (including 'rec1_002.idf').
- Test Panel (Right):** Titled 'Test', it features a graph showing 'Pos_AccPeda[%]/Value' over time. The graph has a y-axis from 0 to 2 and an x-axis from 102 to 113. Below the graph is a table with columns: 'L...', 'Name', 'Value', 'Raster', 'Platform', 'Unit', and 'Downsampli...'. The table contains one row: 'Pos_AccPe...' with a value of 0, raster 'OnChange', platform 'Platform', and unit 'Automatic'. There are also several 'Button 1' and 'Button 2' controls.

Three yellow callout boxes highlight specific actions:

- 1. Project 클릭**: A red box highlights the 'Project' icon in the bottom-left corner of the interface.
- 2. Recording 된 .idf 파일 자동 생성**: A red box highlights the 'rec1_002.idf' file in the 'Measurement Data' folder of the project tree.
- 3. Export 클릭**: A red box highlights the 'Export...' option in the context menu for the 'rec1_002.idf' file.

At the bottom of the interface, the status bar shows: Location: D:\#05. Demo\ASM_Traffic_Demo_GITC\Instrumentation\CD_Traffic; Author: user; Date: 2018-01-17 오후 3:09:50; Original Loca...

ControlDesk 기본 사용법

The screenshot displays the ControlDesk software interface. The main window is titled 'ControlDesk Project: CD_Traffic Experiment: Experiment_001 - [Layout5*]'. The interface includes a menu bar (File, Home, Layouting, Signal Editor, XIL API EESPort, Automation, Platforms, View) and a toolbar with various control buttons like 'Start Immediate', 'Invoke Trigger', 'Set Bookmarks', etc. The left sidebar shows a project tree for 'CD_Traffic*' with subfolders like 'Specifications', 'Project Plans', 'Global Data Sets', 'Variable Descriptions', 'Label Lists', 'Global Devices', 'Python Scripts', 'Signal Description Sets', 'Variable Filters', and 'Experiment_001*'. The 'Experiment_001*' folder is expanded, showing 'Experiment Layouts' (vehicle.lay, dashboard.lay*, acc.lay, sensors.lay, map.lay, Layout5.lay*), 'Hardware Configurations' (Platform [VEOS, assigned to 'VEOS'] with sub-items ASM_Traffic.sdf* and ASM_Traffic_Demo.sdf*, and VEOS Simulation Time Group 1 with Platform [VEOS, assigned to 'VEOS']), and 'Measurement Data' (rec1_002.idf, Reports, Failure Simulation, Python Scripts, Signal Generators, XIL API EESPorts).

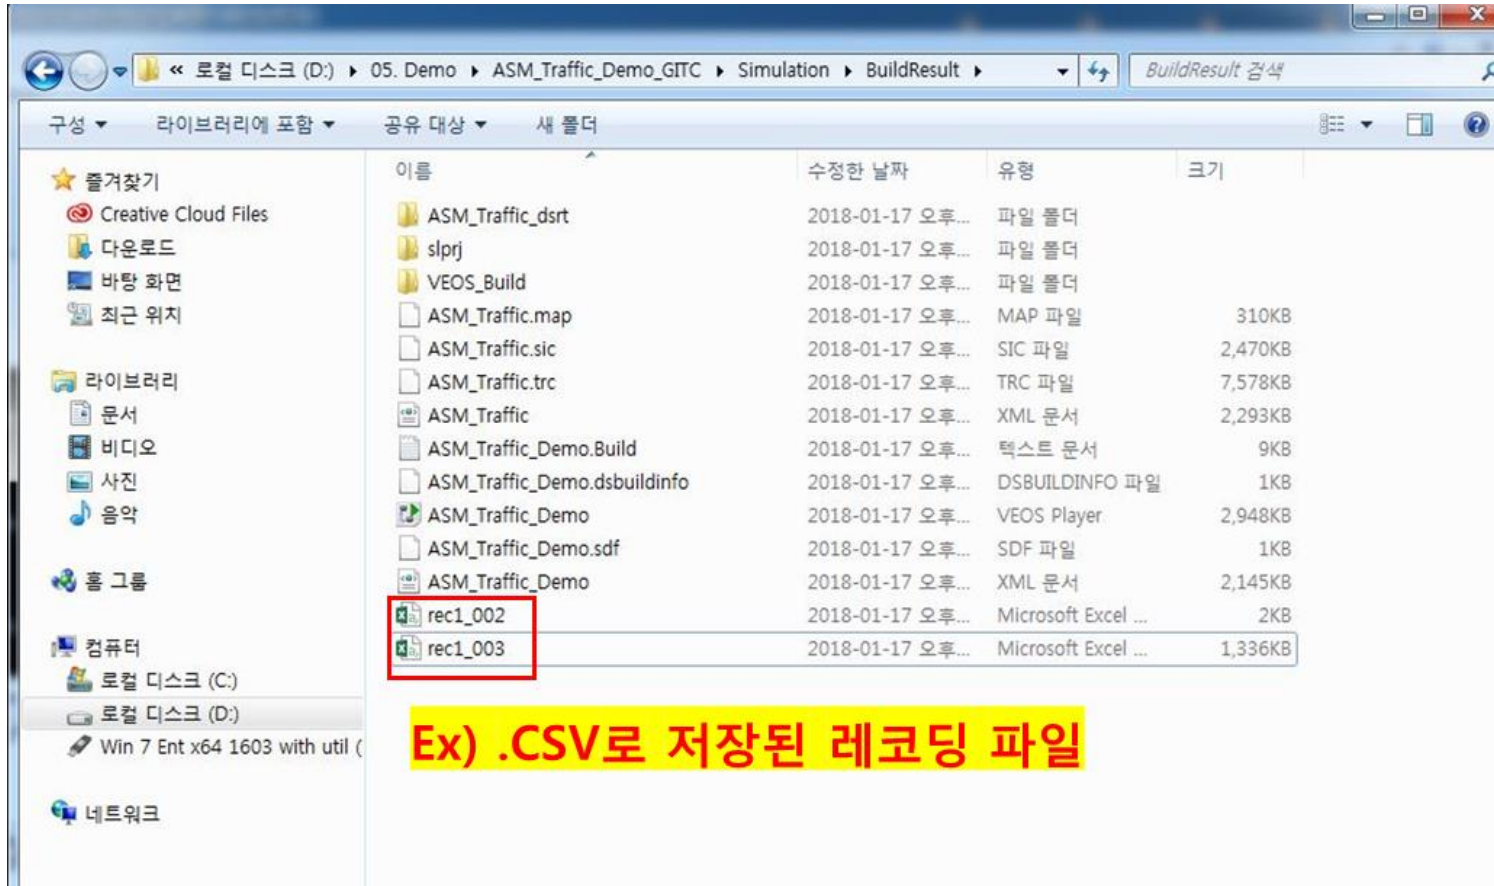

In the foreground, a 'Save As' dialog box is open. The 'Save in:' field is set to 'BuildResult'. The 'File name:' field contains 'rec1_002'. The 'Save as type:' dropdown menu is open, showing options: 'ASAM MDF 4.1 Files (*.mf4)', 'ASAM MDF 4.1 Files (*.mf4)', 'IDF Files (*.idf)', 'Comma Separated Values Files (*.csv)', and 'MATLAB Files (*.mat)'. A red box highlights this dropdown menu. The 'Include bookmarks' checkbox is checked.

The background shows a 'Test' window with a graph and a data table. The graph displays a signal for 'Pos_AccPeda[%]Value' over time. The data table below the graph has the following columns: Value, Raster, Platform, Unit, Downsampli... and the following rows: 0, OnChange, Platform, Automatic.
